

# Deliverable

## D1.6. Data Management Plan

Workpackage	WP1
Lead beneficiary	CEA
Due date	31st of July 2016
Submission date	3rd of January 2017 (after revision recommended at the Interim review)
Type	PU
Author(s)	Margarita Anastassova, Gérard Chalubert, Diana Dimitrova, Francesca Pichierri, Franziska Boehm, Jordi Rovira, Gary Randall
Abstract	This document describes what data the project will generate, how they will be produced and analysed. It also aims to detail how the data related to the STARR project will be disseminated and afterwards shared and preserved.

## Deliverable Description

This document is a deliverable of the STARR project, which is funded by the European Union's Horizon 2020 Programme under Grant Agreement #689947. It describes what data the project will generate, how they will be produced and analysed. It also aims to detail how the data related to the STARR project will be disseminated and afterwards shared and preserved.

### 1. Scope of the document

The STARR project Data Management Plan (DMP) primarily lists the different datasets that will be produced by the project, the main exploitation perspectives for each of those datasets, and the major management principles the project will implement to handle those datasets.

The purpose of the DMP is to provide an analysis of the main elements of the data management policy that will be used by the consortium with regard to all the datasets that will be generated by the project.

The DMP is not a fixed document. On the contrary, it will have to evolve during the lifespan of the project. This first version of the DMP includes an overview of the datasets to be produced by the project, and the specific conditions that are attached to them.

The next version of the DMP will get into more detail and describe the practical data management procedures implemented by the STARR project. The future versions of the DMP will also describe how the system will use data when finished and running semi-autonomously (i.e. after development). Thus, the data management plan will cover all the data life cycle.

## 2. Information about the project

The table below provides synthetic information about the STARR project.

<b>Name</b>	Decision <b>S</b> upport <b>T</b> and self-m <b>A</b> nagement system for st <b>R</b> oke survivo <b>R</b> s
<b>Acronym</b>	STARR
<b>Project objectives</b>	It is crucial to provide stroke survivors with information, problem-solving skills, motivational levers, confidence, and continuous professional and peer support to help them better manage their condition, live independently, and prevent a secondary stroke. At the same time, it is also crucial to inform, with the stroke survivor's permission, their carers and the medical staff about the evolution of the stroke survivor's lifestyle and the risk of stroke. This is the primary objective of the STARR project. We will develop a modular, affordable, and easy-to-use, install and maintain system, which will inform stroke survivors about the relation between their daily activities (e.g., medication intake, physical and cognitive exercise, diet, social contacts) and the risk of having a secondary stroke.
<b>Keywords</b>	Stroke, prevention, risk factors, monitoring, daily activities, sensors, self-management
<b>Call</b>	PHC-28-2015
<b>Funding body</b>	European Commission, H2020 program
<b>Grant agreement No</b>	689947
<b>Members of the consortium</b>	<p><b>Coordinator:</b> French Atomic and Alternative Energies Commission, LIST Institute (CEA LIST)</p> <p><b>Partners:</b> Bluelinea SA, Fondation Hopale, The Stroke Association, RT-RK, Telefonica I+D, Lunds Universitet, University of Luxembourg, FIZ Karlsruhe – Leibniz-Institute for Information Infrastructure, Osakidetza-Servicio Vasco de Salud</p>
<b>Contact</b>	Margarita Anastassova <a href="mailto:margarita.anastassova@cea.fr">margarita.anastassova@cea.fr</a>

<b>Contact's affiliation</b>	CEA LIST, Sensory and Ambient Interfaces Laboratory
<b>Start date of the project</b>	01/02/2016
<b>Duration</b>	42 months

### 3. Responsibility for the data

<b>Person in charge of the data management during the project</b>	<p>Margarita Anastassova (personal and non-personal data)  <a href="mailto:margarita.anastassova@cea.fr">margarita.anastassova@cea.fr</a></p> <p>Franziska Boehm (specific focus on EU regulations about personal data management)  <a href="mailto:franziska.boehm@kit.edu">franziska.boehm@kit.edu</a></p>
<b>Partners' responsibility</b>	<p>Every partner is responsible for the data they are collecting. This is valid for both personal and non-personal data. The data will be collected, combined, stored and transmitted according to the relevant national, European and institutional regulations. As far as the management of personal data is concerned, the partners will be supported by FIZ Karlsruhe, providing guidance on personal data management in an EU perspective.</p>
<b>Data management policy</b>	<p>All personal data collection in STARR will be done within the remit of formal ethics clearances obtained at our testing sites and granted by the relevant university and/or local health officials. Thus, any patient-related data, such as data from pre-existing health record data and behavioural data depicted, for example, by keyboard presses, video, audio, motion tracking will fall under the ethics clearance. Some non-patient data, such as requirements from stakeholders in WP3, in the form of anonymous questionnaire responses &amp; focus group opinions, can be gathered more informally.</p> <p>The legal basis for the personal data processing will be the participant's consent, obtained in accordance with the rules to which the collecting partner is subject.</p> <p>The most relevant standards regarding data handling, in this experimental context with patients, concern the area of ethics, data protection and privacy. They are listed below:</p>

	<ul style="list-style-type: none"> <li>- Directive 95/46/EC: Protection of individuals with regard to the processing of personal data and on the free movement of such data.</li> <li>- Directive 99/5/EC: Radio equipment and telecommunications terminal equipment and the mutual recognition of their conformity.</li> <li>- Directive 98/44/EC: Legal protection of biotechnological inventions.</li> <li>- Art. 7, 8 Charter of Fundamental Rights</li> <li>- Art. 8 European Convention on Human Rights</li> <li>- Case Law by the European Court of Human Rights</li> <li>- Documents of the Article 20 Working Party</li> <li>- Ilves report on E-health</li> <li>- GDPR regulation (2016/679).</li> <li>- Draft data protection regulation.</li> </ul> <p>Ad-hoc behavioural data that we will collect will be of a new form and so no standards yet apply to its usage. In the wider sense of knowledge, management standards and good practice, we will of course record and learn from our activities in the first cycle of STARR to inform our practice from then on.</p> <p>All of our patient data will be reported as anonymized group summaries in the project deliverables and in peer reviewed publications. Anonymous individual quotes describing requirements will also be used in these reports. During system evaluation, user performance data (e.g. task execution time and number of errors) is transient and context sensitive (to the particular task, sensors and user). There is no public value in the data and hence no foreseen need for public access beyond that of the therapist. Nonetheless we have no objection in principle to releasing this data in the spirit of Open Access if requested.</p>
<p><b>Ownership and access to data</b></p>	<p>A consortium agreement was negotiated and signed by all the parties in order to inter alia specify the terms and conditions pertaining to ownership, access rights, exploitation of background and results and dissemination of results, in compliance with the grant agreement and Regulation n°1290/2013 of December 11th, 2013. The</p>

consortium agreement was based on the DESCA Horizon 2020 Model Consortium Agreement with the necessary adaptations considering the specific context and the parties involved in the project. Its basic principles are as follows:

- The parties will exhaustively identify the background intellectual property they will bring to the project, and assess its availability for access rights as regards to potential third parties' rights over such background;
- Ownership of results including joint results generated by two or more parties will go to the party(ies) having generated such results;
- The owning parties will take all appropriate measures for the protection of the results capable of commercial or industrial exploitation, notably through intellectual property rights when relevant;
- The parties will use their best efforts to exploit and disseminate the results, either directly or indirectly, for instance by out-licensing said results;
- Each party will give access rights (through licenses) to their background and results to the other parties for the implementation of the project and/or for the exploitation of those other parties' own results (under fair and reasonable conditions).

Knowledge management follows the strategy presented in the Figure below. The IPR activities are organised according to the different project phases.

In principle, Foreground is managed according to the provisions of the European Commission, and the access to the foreground created throughout the project lifetime is

specified by the Consortium Agreement. As a general rule, the foreground is considered as a property of the Contractor generating it, and in this sense the originator is entitled to use and to license such right without any financial compensation to or the consent of the other Contributors. In case of licensing to third parties, the Contributors shall be informed in advance and appropriate financial compensation shall be given to them. Starting from these basic rules, other particular situations will be treated in WP9 (Dissemination & Exploitation):

- If the features of a joint invention, design or work are such that it is not possible to separate them, the Contributors could agree that they may jointly apply to obtain and/or maintain the relevant rights and shall strive to set up a joint exploitation agreements in order to do so;

- An originator of the foreground could decide not to seek protection of its Foreground. In this case, another contractor interested in such protection might apply for it, advising the other Contractors. In case several Contractors are interested, an agreement is necessary between them.

Concerning access rights, each Contractor shall take appropriate measures to ensure that it can grant Access Rights and fulfill the obligations under the EU Contract. The Contractors will agree that Access Rights are granted on a non-exclusive basis, and that, if not otherwise provided in the Consortium Agreement or granted by the owner of the Foreground or Background, the Access Rights does not include the right to grant sub-licenses. The Consortium agreement will dedicate one section or one appendix to define which access rights to the background may be granted. Access rights to foreground and background needed for the execution of the project will be granted on a royalty-free basis to the project partners.

Publication and dissemination of foreground are granted with the approval of the Consortium, making sure that the period of secrecy needed for IP protection is respected. Contractors have to inform the Consortium and the Commission of its intention to publish on its foreground. Adequate references to the Contract with the EC shall be given in the publication. Publication can be impeded if

	another contractor can show that the secrecy of the foreground is not guaranteed.
<b>Publication of research data</b>	Since in STARR certain research activities rely on the processing of personal data of stroke survivors, the privacy and the protection of their personal data should be ensured. However, this does not exclude the publication of aggregated, properly anonymized data, e.g. in statistical form. In this way both the privacy of the stroke survivors will be respected and scientific results can be disseminated

#### 4. Data set description

The project partners have identified the dataset that will be produced during different phases of the project. The list is provided below, while the nature and details for each dataset are given in the subsequent sections. This list is indicative and will be adapted (addition/removal/modification of datasets) in the next versions of the DMP.

<b>Data set name</b>	<b>Docs</b>
<b>Type of data</b>	Documents
<b>Format</b>	.docx, .doc, .odt, .sxw, .rtf, .xlsx, .xls, .pptx, .ppt, .pdf, .xps, .txt
<b>Source</b>	<p>This data comes from:</p> <ul style="list-style-type: none"> <li>- Project meetings (minutes, presentations, other supporting documents), exchange of ideas</li> <li>- Questionnaires (paper originals, responses captured in an Excel spreadsheet), analysis (e.g. charts) within the spreadsheet</li> <li>- Interviews transcribed to Word documents (anonymised), analysed data from the interviews</li> <li>- Focus groups: discussions transcribed to Word documents (anonymised), synthesis of themes captured in Word documents</li> <li>- Literature review: references in an Endnote database; Word documents with search details (databases, strategies, results) and reviews</li> <li>- Consent forms: signed paper documents</li> </ul>
<b>Reuse and sharing</b>	Only anonymised and aggregated data are transmitted and reused by the partners not collecting the data.
<b>Archiving and preservation (including storage and backup)</b>	The data will be stored by the partner collecting it (on their own computers and/or institutional servers).

<b>Data set name</b>	<b>Audio</b>
<b>Type of data</b>	Audio files
<b>Format</b>	.wav, .aiff, .flac, .mp3, .wpl, .xspl, .rec, .wv, .ram, .sng, .mp4a, .aac, .asx, .wma
<b>Source</b>	This data comes from: <ul style="list-style-type: none"> <li>- Recorded interviews and focus group discussions</li> </ul>
<b>Reuse and sharing</b>	No reuse by the partners not collecting the data except for anonymized excerpts of interviews.
<b>Archiving and preservation (including storage and backup)</b>	The data will be stored by the partner collecting it (on their own computers and/or institutional servers).

<b>Data set name</b>	<b>Video</b>
<b>Type of data</b>	Video files
<b>Format</b>	.flv, .vob, .ogv, .ogg, .gif, .avi, .mov, .qt, .rm, .rmvb, .mp4, .m4p, .m4v, .mpg, .mp2, .mpeg, .mpe, .mpv, .flv .f4v .f4p .f4a .f4b
<b>Source</b>	This data comes from: <ul style="list-style-type: none"> <li>- Recorded interviews, focus group discussions, observations, user tests.</li> </ul>
<b>Reuse and sharing</b>	No reuse by the partners not collecting the data except for anonymized excerpts of video recordings.
<b>Archiving and preservation (including storage and backup)</b>	The data will be stored by the partner collecting it (on their own computers and/or institutional servers).

<b>Data set name</b>	<b>Image</b>
<b>Type of data</b>	Digital images
<b>Format</b>	.tif, .tiff, .gif, .jpeg, jpg, .jif, .jfif, .jp2, .jpx, .j2k, .j2c, .fpx, .pcd, .png, .pdf
<b>Source</b>	This data comes from: <ul style="list-style-type: none"> <li>- Pictures taken during project meetings, focus</li> </ul>

	<a href="#">group discussion, user and technology testing.</a>
<b>Reuse and sharing</b>	Can be reused by other partners if properly anonymised and reuse authorised by the partner who has taken the picture(s)
<b>Archiving and preservation (including storage and backup)</b>	The data will be stored by the partner collecting it (on their own computers and/or institutional servers).

<b>Data set name</b>	<b>Data</b>
<b>Type of data</b>	Data coming from the different sensors to be used during the project
<b>Format</b>	All the formats supported by these sensors (to be defined later)
<b>Source</b>	This data comes from: - <a href="#">Sensors to be used during the project.</a>
<b>Reuse and sharing</b>	Can be reused by other partners if properly anonymised and reuse authorised by the partner owning the data
<b>Archiving and preservation (including storage and backup)</b>	The data will be stored by the partner collecting it (on their own computers and/or institutional servers).

<b>Data set name</b>	<b>Code</b>
<b>Type of data</b>	Code
<b>Format</b>	To be defined
<b>Source</b>	Development of software
<b>Reuse and sharing</b>	As defined in the consortium agreement
<b>Archiving and preservation (including storage and backup)</b>	The data will be stored by the partner producing it (on their own computers and/or institutional servers).

## 5. Metadata

Metadata is data on the research data themselves. It enables other researchers to find data in an online repository and is, as such, essential for the reusability of the dataset. By adding rich and

detailed metadata, other researchers, can better determine whether the dataset is relevant and useful for their own research. In the online depositories used by STARR partners, metadata (type of data, location, population etc.) will be uploaded in a standardized form. This metadata will be kept separate from the original raw research data.

## 6. Data volume

The volume of data collected by the STARR platform will be limited to the time during which the pilot will be run by each patient, as well as to the total number of participating patients and the quantity of information that will be sent from the client agents to the platform. It is estimated that the total amount of information gathered from telemonitoring without including the smart-space will be under 100Gbytes making the following assumptions (N = 20, effective time pilot = 2 months, daily system usage = 12 hours, sensors data rate = 1Kbytes/s, which estimate a total of 52Gbytes). This information will be duly protected as described in section 7.

## 7. Data security

The STARR project will use methods that emphasize good field access and extended contact and trust building with participants. Due to the sensitive nature of some of the topics that will be discussed in interviews and focus groups, data security is of vital importance. The following guidelines will be followed in order to ensure the security of the data:

- Keep anonymised data and personal data of respondents separate;
- Encrypt data if it is deemed necessary by the local researchers;
- Store data in at least two separate locations to avoid loss of data;
- Limit the use of USB flash drives, with a clear commitment not to store any personal data on such sticks;
- Save digital files in one the preferred formats (see table above), and
- Label files in a systematically structured way in order to ensure the coherence of the final dataset.
